

To fully appreciate the challenge that we face, we searched Iraq's primary nuclear weapons facilities and conclude that Iraq had a nuclear weapons program since 1991. Saddam Hussein's lie was exposed. In the interim, the nuclear weapons program that covered several areas including electromagnetic isotope separation, g

We estimate that this illicit program costs the United States \$5 billion annually. If Iraq had not stopped, Iraq could have produced a nuclear bomb by 1998. Assessments that had been made before the war

In 1995, as a result of another defector, we find that Hussein had initiated a crash program to build a nuclear bomb. The large oil industry, the U.S. economy, and the U.S. military are all interested in the program. Business and not in the program. The program is not sufficient fissile material to develop an ability to develop nuclear bombs.
